INTRODUCTION

This project is a Student Registration Form developed using HTML and CSS. The form is designed to collect essential student information such as registration ID, name, gender, date of birth, contact details, department, course, email address, password, and resume. CSS styling has been applied to improve the appearance of the form through layout formatting, colors, borders, and hover effects. The project

demonstrates the use of various HTML form elements and basic web design techniques for creating an interactive user input interface.

CONCLUSION

The Student Registration Form project successfully demonstrates the implementation of HTML form elements and CSS styling to create a user-friendly data collection interface. It includes different input controls such as text fields, radio buttons, date selectors, file uploads, and action buttons. Through this project, the concepts of form design, user input handling, and webpage styling were effectively explored, providing a strong foundation in front-end web development.
